RE: Cribs and Cradles Regulations

College Woodwork
145 Clarence Biesenthal Dr.
Oshawa, Ontario
L1K 2H5

To whom it may concern:

AkzoNobel Wood Coatings Ltd. does not use any raw materials which contain lead or lead compounds in any of its finishes. The same holds true for antimony, arsenic, cadmium, selenium and mercury; none of these elements or their compounds are added in anything AkzoNobel produces.

Furthermore, we proactively eliminated the presence of phthalate plasticizers in the products that you purchase as they have been associated with health hazards in children's toys and plastic articles.

The finish system used at College Woodwork is 432-1229 Danspeed Sealer and 424-0021 (or -0010) Danspeed Topcoat. You may rest assured that none of these products contain any amount of any of the regulated materials found in section 14 of the Cribs, Cradles and Bassinets Regulations under the Hazardous Products Act (P.C. 2010-1412).

Respectfully,

Michael Chrisomalis
Technical Director
AkzoNobel Wood Coatings Ltd.
